

Adhesives, sealants and coatings for the global marketplace.

Innovative solutions for Product Assembly
and Specialty Construction

www.Seal-Bond.com

our innovations. . .your success

We know what's important to you.

An insistence on your safety

Seal Bond™ is firmly committed to a policy enabling all work activities to be carried out safely and with all possible measures taken to remove risks to the health, safety and welfare of our workers, contractors and authorized visitors. Seal Bond adheres to the highest standards for the safe operation of facilities and protection of our environment, our employees, our customers and the people of the communities in which we conduct business.

Safety

An adherence to your standards.

As a responsible manufacturer and employer, we set extremely high standards for quality. This is why we promote the ongoing pursuit of continuous quality improvement at every level of our organization.

Seal Bond is **ISO 9001:2008** Certified for the Design, Development and Manufacturing of Environmentally Conscious Adhesives and Sealants.

Quality

An awareness for your environment.

Long before there was an awareness or demand for environmentally friendly products, Seal Bond was developing advanced polymer based products with the environment in mind. Containing low or no VOCs, most of our innovative products will help you qualify for LEED® material resource credits. Unlike many solvent based products, Seal Bond adhesives, sealants and coatings have been tested safe for the environment and for those who may come in contact with them.

Environment

OUR COMMITMENT TO OUR CUSTOMERS IS VERY CLEAR:

Build lasting relationships by providing state of the art technical solutions and exceptional performance better than anyone in the industry.

A little about us.

Seal Bond, headquartered in Spring Lake, Michigan (USA), has been developing and manufacturing high performance adhesives, sealants and coatings for more than 15 years. Through a combination of focus and innovation, Seal Bond continues to create new product offerings for the specialty construction and product assembly markets.

We take great pride in providing customized solutions and unmatched value for our industry clients. From environmental safety to technological advancements, our products succeed where others have failed. Our speed and flexibility in formulating, testing and delivering quality products sets us apart—close to home and around the world.

A lot about you.

Seal Bond offers an extensive variety of product solutions based on multiple technology platforms with a focus on hybrid polymer formulations.

Technology & Chemistry

Many Seal Bond products are formulated to provide flexible elastomeric properties upon cure. The ability of our products to flex under various conditions of stress and over a range of environmental conditions, yields extremely high performance.

Seal Bond products that exhibit elastomeric (versus rigid) properties upon cure may offer some or all of the following advantages:

- Compensation of movement due to varying thermal expansion and contraction of substrates
- Vibration and sound dampening
- Uniform stress distribution—eliminating localized stress evident with mechanical fasteners
- High impact resistance
- Compensation for torsion forces
- No drilling, tapping, welding or other damage to component surfaces
- Prevention of contact corrosion

Toll Blending & Private Label

Seal Bond dedicates a portion of its manufacturing capacity and technical services to firms interested in improving their market position through toll manufacturing and private label

activities. Clients utilize our technology and services to continuously improve and adapt to a changing business environment, as well as complement their product portfolio.

Seal Bond's private label program encourages long lasting relationships with industry partners large and small. Seal Bond proudly offers an enhanced supply program that includes formulation assistance, manufacturing, packaging, warehousing and distribution.

Custom Formulation & Color Matching

Seal Bond offers a wide range of product solutions—from custom formulations, color matching and more to meet your adhesive, sealant and coating needs while delivering exceptional value.

Your industry, our expertise.

Product Assembly

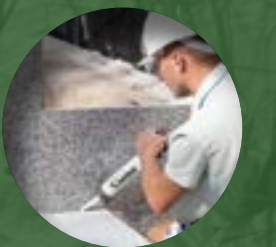

Seal Bond manufactures an extensive selection of adhesive and sealant formulas suitable for product assembly applications including, but not limited to—appliances, furniture, truck and trailer, boats and much more. Our chemistry provides the ability to bond to a wide range of substrates making it an excellent choice for marrying dissimilar materials. More often than not, high performance bonding can be achieved using our products without primers or other surface treatments often required when using alternative adhesive chemistries.

Recognizing that many companies are seeking ways to reduce the cost of product assembly applications while maintaining or improving strength, Seal Bond provides bonding solutions that offer an excellent alternative to mechanical fasteners, two-sided tapes, welding, and other product assembly related adhesive chemistries. Custom formulations can be created to provide adhesive and sealant solutions for projects with guidelines specific to economic value and performance requirements.

Specialty Construction

Applications for adhesive, sealant and coating products in the building and construction arena are continuously evolving. As new technologies and environmental regulations impact the industry, Seal Bond is at the forefront in research and development to keep our customers technically current and regulation compliant. Developed for use in the construction market, the Seal Bond Construction Series includes adhesives, sealants and coatings. From flooring and wall panel applications to concrete joint sealants requiring specific chemical and/or extreme temperature resistance, Seal Bond products are found on construction sites around the world.
